

AquaCal® *New!* ClineFinder™

Temperature and Depth Sounder
for Sport Fishing

Turn your fishfinder into a bite finder!

Measures water temperature fast down to 50' –
vital information no sonar can deliver.

- **Catch more fish!**
- **Save more time!**
- **Have more fun!**

ClineFinder™ gives you a competitive advantage

The Pros and Experts Agree:

The best way to improve your fishing success is to know the water temperature where the fish live.

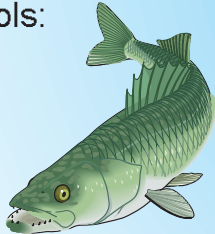

AquaCal® ClineFinder™ is the best tool for the job!

ClineFinder™ helps you find fish-catching patterns faster – with or without a sonar!

Fishfinders show you the bottom structure and the fish – but they can't distinguish where those fish are most likely to bite. **ClineFinder** will help you find and catch the species you're after!

Because fish are cold blooded, water temperature strongly controls:

- location
- feeding habits
- activity level
- aggressiveness
- spawning.

Bass, walleye, trout, salmon – whatever species you're after will seek it's own temperature comfort zone. If a thermocline is present, hungry game fish will suspend just below that depth. By quickly measuring the temperature at a variety of depths in your lake or river, you can understand and use fish-catching patterns better than ever before!

Smaller is Better when it comes to temperature sensors. The ClineFinder sensor is tiny for ultra-fast response, snag resistance, and low drag. The unique Cable Saver™ mounting ensures that, if snagged, the separate weight will release before the cable and sensor are damaged. Other weights or accessories can easily be clipped on. The sensor can also be clipped directly to a downrigger ball.

ClineFinder™ is the best deep-reading thermometer ever!

ClineFinder is the fastest, easiest, and most-accurate way for you to measure temperature at depth. Spend less time measuring and more time catching fish!

ClineFinder responds within seconds to every subtle change and immediately displays the exact temperature digitally on a large, easy-to-read LCD. Every unit is individually calibrated to insure unequalled accuracy and consistency.

ClineFinder has a thin cable which reels in and out quickly and easily – the enclosed cable housing eliminates tangles, twists, and mess! Two models are available, with 36 ft.- and 50 ft.-long cables. Depth is shown on the cable every 2 feet with easy-to-read markings. Or you can read the sensor depth directly from your sonar screen!

ClineFinder is rugged, weatherproof, and waterproof for years of trouble-free service. You don't even have to worry about turning it off – it runs continuously for years before the alkaline AA batteries need replacing. Like all AquaCal thermometers, it's proudly made in the USA and is backed by a 1-year warranty.

AquaCal® ClineFinder™

For all freshwater and saltwater game fish

Know the Temperature and Depth.
Catch the Fish.

A quality scientific instrument.
Made right here in the USA.

- Fast
- Accurate
- Easy to use
- Durable
- Waterproof

Specifications

Features: Unbreakable and fully waterproof. Large, easy-to-read digital display. Super-fast temperature response. Integral cable reel. Two models: 36' depth and 50' depth.

Accuracy: Guaranteed accurate to $\pm 0.5^\circ$ from 40° to 100° F, and $\pm 1.0^\circ$ over entire operating range of 30° to 115° F.

Batteries: 3 AA Energizer® batteries factory installed, user replaceable. Battery life is 2-3 years of continuous operation.

Warranty: One-year limited repair or replacement warranty covers defects in material and workmanship, under normal non-commercial sport-fishing use in fresh or salt water.
