

AquaCal® *New!* ClineFinder™

Temperature and Depth Sounder
for Science, Education, and Industry

Measures temperature vs. depth to 50'

- **Easy to Use**
- **Fast and Accurate**
- **Waterproof and Durable**

AquaCal® ClineFinder™ Temperature and Depth Sounder

The best deep-reading thermometer ever made!

ClineFinder is the fastest, easiest, and most-accurate way for you to measure temperature vs. depth. Work more efficiently and with less frustration!

ClineFinder responds within seconds to every subtle change and immediately displays the exact temperature digitally on a large, easy-to-read LCD. Every unit is individually calibrated to insure unequalled accuracy and consistency.

ClineFinder has a thin cable which reels in and out quickly and easily – the enclosed cable housing eliminates tangles, twists, and mess! Two models are available, with 36 ft. and 50 ft. maximum depths. Depth is shown on the cable every 2 feet with easy-to-read markings. Or you can read the sensor depth directly from your sonar screen!

ClineFinder is backed by a 1-year limited warranty and excellent customer service through Catalina Technologies.

AquaCal® ClineFinder™ is durable and reliable

AquaCal ClineFinder is designed and built in the USA. It's rugged, weatherproof, and waterproof for years of trouble-free service. The case is molded from unbreakable plastic with built-in chemical and sunlight protection. From the liquid-crystal display to the attractive label, all components have been engineered for long life under temperature extremes and outdoor exposure.

Every AquaCal thermometer comes with long-life **Energizer®** batteries already installed. These provide 2-3 years of maintenance-free service, and can then be easily replaced.

Smaller is Better when it comes to temperature sensors. The ClineFinder sensor is tiny for ultra-fast response, snag resistance, and low drag. The unique Cable Saver™ mounting ensures that, if snagged, the separate weight will release before the cable and sensor are damaged. Other weights or accessories can easily be clipped on, including Secchi disks and sampling bottles.

AquaCal® ClineFinder™ is the most accurate

Every AquaCal thermometer is digitally calibrated with a high-accuracy laboratory reference. This unique step guarantees a true accuracy of $\pm 0.5^\circ$. In contrast, other digital thermometers in this price range are not calibrated, and are often inaccurate by as much as $\pm 2^\circ$!

AquaCal® ClineFinder™

Temperature and Depth Sounder
for Science, Education, and Industry

Specifications

Features: Case is unbreakable and fully waterproof, with non-slip hand grip and wrist strap. Large, easy-to-read digital display. Micro-sensor for super-fast response to water temperature. Sensor cable (36' or 50') is clearly labeled every 2' and stores neatly inside built-in reel. Detachable weight can be replaced with a Secchi disk, sampling bottle, or other accessory (up to 3 lbs. weight). Manufactured in the USA.

Accuracy: Guaranteed accurate to $\pm 0.5^\circ$ from 40° – 100° F, and $\pm 1.0^\circ$ over entire operating range of 30° – 115° F. Celsius models also available.

Batteries: 3 AA alkaline batteries installed, user replaceable. Typical battery life is 2-3 years of continuous operation.

Warranty: One-year limited repair or replacement warranty covers defects in material and workmanship, under normal commercial or personal use in water or mild aqueous solutions.
